

Digital Phones 5000 Series

The smarter way to do business.

The Samsung 5000 range of digital handsets are stylish and easy to use, with each handset designed to maximise the benefits of the OfficeServ's functionality. Whether that is a simple telephone, softphone or fully featured handset with LCD display and programmable functions.

As technology advances you can be sure that Samsung will be at the leading edge of the revolution, as all components are manufactured in house, keeping your business ahead of the game.

Simple and Stylish

The Samsung 5000 series display handsets feature a 32-character, 2 line scrollable LCD screen to display call information like Calling Line Identification (CLI, who is calling) and Direct Dial Inward (DDI, who is being called). The LCD also helps the users navigate effortlessly through systems features.

In addition, display handsets incorporate programmable soft keys with tri-coloured LED status indicators that can be used for speed dialling, as well as one-touch feature access keys and traditional 'Key & Lamp' working.

Optional add-on modules can also be assigned to compatible handsets, creating 64 additional soft keys. Or you can choose the standard models as a cost effective alternative for staff whose telephony requirements are not so demanding.

Flexibility to Expand

The OfficeServ 7000 series provides on-going flexibility to meet the needs of future expansion, moves and changes. Adding more handsets or moving people around to new extensions is quick and easy whether that's within the office, at another office, away from the office or while working from home.

The application of Digital technologies means Samsung can truly unite communications within any organisation across LANs, WANs and the Internet. With shared features and functionality plus a common look and feel to every terminal.

Key Benefits

- Multiple handsets available to suit a variety of tasks
- No training required—simple and easy to use
- Ability to wall mount—perfect for where space is a premium
- High quality voice improves call experience
- Caller & called number identification showing who called and why
