

## Samsung's New Wireless IP Desk Phone

The next evolutionary stage of the business desk phone is here. The new wireless 802.11n deskphone from Samsung changes the rules in IP phone deployment and the customer's experience.

Wired or wireless, the new SMT-i5343 IP phone from Samsung is a powerful and intuitive business phone that integrates the desk phone into a user's mobile world more than any other solution on the market.

Using the latest NFC, Bluetooth and wireless technology; the SMT-i5343 raises the bar on fixed and mobile business communications.

### Powerful Wi-Fi Technology

- Dual antenna diversity
- 5GHz dynamic frequency selection
- WEP, WPA & WPA2 security
