IP Phones
SMT i3105

The smarter way to do business.

The Samsung i3105 IP phone is a simple but elegant design, ideally suited to users with general day to day telephone requirements.

Easy to use

The i3105 is easy to use and is a perfect solution for when general telephone use is required, from the production floor to management offices.

Cost Effective

The i3105 phone provides a number of high value features such as full hands free capability and programmable soft keys at an extremely affordable price.

The Dual Port data switch reduces the cost of cabling for the PC and phone, and the PoE reduces the total power outlet requirements reducing costs further.

Remote Working

Intelligent VPN software allows all users to connect remotely and securely over the internet without any extra hardware, with your calls secured using sRTP and TLS encryption*.

When deployed remotely the i3105 handset becomes a seamless extension of the OfficeServ supporting all system features including paging, voicemail, desk to desk dialling and desktop application integration.

Hot Desking

Users can log into any i3105 handset and BRING their personal details including extension number and handset configuration to the temporary desk they are using at that time.

* sRTP and TLS available when used with the OS7200 & OS7400

Superior Quality

If running voice and data on the same network the i3105 supports both data priority and voice tagging capabilities allowing suitably equipped networks to apply full QoS 'Quality Of Service' maintaining crystal clear speech quality. Furthermore, the i3105 supports 'Packet Loss Correction' (PLC) technology and the capability to select the best speech compression based on the available bandwidth, whether if calling a colleague in the office over the local area network or remotely over the public internet.

Security and Resilience

The 3105 is one of the most secure VoIP options on the market supporting sRTP* (Secure Real Time Protocol) encrypting speech and 'IP Address Secure' technology which limits access to the system to users from known locations only. These technologies block rogue attempts to use genuine users account details (if known) to connect to the system and make calls using your phone lines.

Feature List

- **LCD: 3.2" 128 X 64 pixels, Mono**
- **Fixed Function Keys: 10**
- **Context Sensitive Keys: 3**
- **Programmable Keys/BLF: 5/5**
- **Voice Codec: G.711, G729AB**
- **Network Interface: 2 port 10/100 baseT**
- **PoE3.4W (Class 1)**
- **Dimensions : W XL X D (mm) 170 x 199 x110**
- **Speakerphone**
- **Multi Server Support**
- **Intelligent Remote Connections**

Key Benefits

- Entry level IP phone optimised for replacing traditional digital phones

- Small footprint, with ability to wall mount— perfect for where space is a premium

- No training required— easy to use context driven screen

- Caller & called number identification showing who called and why

- Full featured IP Phone— supports conference, call transfer, call forward and message indication, on-hook dialling, hands free operation
